The Sights

JEJU ISLAND

JEJU ISLAND is located in south-west and is the biggest island of Republic of Korea. Basalt rocks cover more than 90% area of this volcanic island. The island is oval-shaped with Halla Mountain in the center stretching 73 km from east to west and 41 km from north to south. It has a mild oceanic climate, where the temperature does not reach sub-zero levels (in most cases) even in the winters. A universal recreational island with beautiful natural landscape received as a gift from nature. Relatively isolated from the rest of the world, the island's nature has been well preserved in its original state.

WORLD NATURAL HERITAGE refers to tangible assets with outstanding universal values, which can't be replaced by any others once destroyed and must be preserved and maintained for the whole humankind. Jeju Island was designated as World Natural Heritage in the title of 'Jeju Volcanic Island and Lava Tube' in 2007.
